SUMMARY

Senior full-stack developer with production experience across insurance, healthcare, internal business systems, and recent independent product and client work. Strong in React and TypeScript front ends, API and authentication integration, inherited codebases, UI and UX cleanup, deployment, and shipping practical software that holds up in real use.

CORE SKILLS

C#, .NET, ASP.NET MVC, JavaScript, TypeScript, React, Vite, HTML/CSS, responsive UI, Node.js, Next.js API routes, Supabase, REST APIs, SQL, OAuth, third-party integrations, debugging, refactoring, async workflows, Git, deployment, cPanel, SFTP, Cloudflare, DNS, SSL, AI-assisted product features

RECENT INDEPENDENT PRODUCT AND CLIENT WORK

Independent Full-Stack Developer | WebDiggity, Aerovisus, and client web platforms

- Built and extended a multi-tenant web platform for AI assistants, SEO and AEO workflows, social media scheduling and publishing, QR campaigns, and image or media workflows using React, TypeScript, Vite, Next.js API routes, and Supabase.
- Added shared-account authentication, Google and Meta OAuth flows, publishing queues, knowledge-base tooling, and client-specific admin workflows for real operator use.
- Shipped responsive, client-facing sites and branded web experiences for small businesses, with emphasis on conversion, mobile usability, chatbot integration, and maintainable content flows.
- Handled production deployments and migrations across hosting, DNS, Cloudflare, cPanel, SSL, and SFTP, and resolved cross-origin, authentication, and rollout issues in live environments.
- Used AI-assisted generation where it made sense for SEO planning, article drafting, social media operations, and support tooling without treating AI as a substitute for product judgment.

Technologies: TypeScript, JavaScript, React, Vite, Node.js, Next.js, Supabase, HTML/CSS, REST APIs, OAuth, Cloudflare, cPanel, SFTP

PROFESSIONAL EXPERIENCE

Senior Developer | The Seibels Bruce Group

- Built and maintained web applications supporting underwriting, claims, and agent workflows.
- Developed full-stack systems across UI, services, databases, and integrations.
- Led legacy system redesigns that improved maintainability, performance, and operational reliability.
- Implemented CI/CD pipelines and automated reporting, notifications, and business workflows.
- Resolved production issues in business-critical systems with direct ownership of application behavior.

Technologies: C#, .NET, ASP.NET, SQL Server, DB2, Web Services, MVC, CI/CD pipelines

Programmer / Analyst | Atherotech, Inc.

- Developed web and desktop applications for a clinical laboratory environment.
- Built secure data exchange systems for transmitting medical results via VPN and EDI.
- Implemented automated distribution systems supporting multiple report formats and delivery methods.
- Worked within HIPAA compliance and electronic data security requirements.

Consultant | U.S. Pipe and Foundry

- Completed development of a transportation and mileage calculation system under time constraints.
- Delivered business-critical functionality and stabilized the application for operational use.

Technical Support Coordinator | Main Street Checks, Inc.

- Provided technical support and training for financial institutions nationwide.
- Assisted with development of internal tools and an online reorder system.
- Maintained internal systems and company web presence.

ADDITIONAL

Independent client work has included technical troubleshooting, deployment ownership, requirements translation, direct communication with non-technical stakeholders, and quick ramp-up across unfamiliar tools.

EDUCATION

Coursework in Programming, Web Design, and Computer Graphics | Virginia College, Birmingham, AL
